### ABSTRACT

This New Hampshire Community Technical College System (NHCTCS) Annual report provides data and descriptions about its programs, students, and educational outcomes. Beginning with the NHCTCS mission statement, the report discusses access and excellence in education, providing background information on the NHCTCS and the opportunities it provides. Data is included on total and full-time equivalent enrollments according to college location. One section, the graduate profile, indicates the educational or employment status of NHCTCS graduates as of November 1997. A short description of the class of 1997 is provided, along with the outcomes of their education. The report then offers a partial listing of New Hampshire companies employing NHCTCS graduates. Data concerning return on investment, determined by historical starting wages, is also illustrated. The next section contains a list of some of the colleges and institutions that students have transferred to after completing courses at one of the NHCTCS campuses. Descriptions of workforce training programs and the NHCTCS police academy are also provided. The report concludes with a 1997 training summary indicating student enrollment and outcomes of specific programs, and the fiscal summary, which provides funding information. Members of NHCTCS governance are also identified. (YKH)

# Secess and Excellence in Education

For over fifty years, New Hampshire's Community Technical College System (NHCTCS) has been, and continues to be, committed to ensuring that every person who wants a solid education has *access* to an outstanding one.

The New Hampshire Community Technical College System is the primary supplier of highly skilled personnel for New Hampshire business and industry. The focus remains on accessibility and technical excellence. There are more than 20,000 students enrolled in various NHCTCS programs each year. The NHCTCS offers over 75 different associate degrees, and more than 165 diploma and certificate programs, and works with businesses to supply specially designed programs on specific topics. Its programs reflect the needs of business, industry and technology, health, and allied health. As the primary (and in some cases, the only) source of training in the state, the NHCTCS concentrates on technical fields.

The Community Technical College System is composed of seven college campuses - in Berlin, Claremont, Concord, Laconia, Manchester, Nashua and Stratham - and several satellite locations. These fulfill an increasing need for education throughout the state. In New Hampshire, the percent of high school graduates attending college has increased by 23% from 1985 - 1994, and currently one out of four manufacturing jobs require some post secondary education (by 2010, that number will grow to two out of three). Enrollment in NHCTCS programs is open to anyone, regardless of historical performance. When needed, colleges make remedial programs available to prepare students for the challenges of a particular curriculum. Programs establish clear performance expectations, and are competency based. Some utilize available technology like the Internet to permit distant students to learn at their own schedule, and all student to access leading edge information in their field of study.

The NHCTCS has increased access through outreach to special populations. One unique example is a leading edge and nationally recognized program called "Transformations", in the correctional facility at Laconia. It provides applied technology programs to inmates, the credits from which may be transferred to NHCTCS upon release. This program is poised to continue, and it may appear in more locations as the prison system expands. The NHCTCS works with the State Prison System to accredit and support their educational programs. In alliance with the New Hampshire Job Training Council (JTC), and acts as the grant recipient, then awards funds to the JTC administer. The NHCTCS also provides the JTC training and development programs which benefit disadvantaged and outplaced workers.

The business and education communities, planning for a future that will require more skilled workers than ever before, share a feeling of optimism. As part of this preparation, the NHCTCS coordinates a state Task Force on Comprehensive Work Force Development, and represents New Hampshire on the Science and Technology Council of the States. Some New Hampshire companies find that their growth is not limited by their ability to sell products in the market place, but by the strength of their skilled labor force.

By establishing work force training initiatives such as Technology Deployment Centers (TDC), which train business employees to maximize new technologies and increase their productivity and competitiveness, the NHCTCS is striving to become the premiere source for work force training. Other programs focus on electronics and assembly, computer networking solutions, Total Quality Management, and Internet training. These programs are very attractive to the business community. Companies estimate that they realize \$30 for every \$1 invested in education and training. The NHCTCS works

# ccess and Excellence in Education (continued)

with business and industry in diverse ways. For example, the colleges secured a federal grant from the National Institute of Standards and Technology to establish a manufacturing extension program that provides technical assistance and training for small manufacturers. The NHCTCS provides the required matching funds.

continues to introduce a labor force that is Another example of a creative approach that benefits both industry and the student population is the Virtual Workplace, where stresses actual industry conditions. The trained to apply learned skills efficiently students learn in an environment that infusion of skill standards has had a far greater effect on the teaching and learning process than just assuring that the subject ing environment, industry methods and educational practice. By using industry standards (such as ISO9001) as the classroom management tool, the NHCTCS in their selected industries. The trend of investing in the current work force to enmatter is up-to-date. In this dynamic learnassessment techniques replace traditional

hance skills and increase productivity will continue, and the NHCTCS has consciously invested in and committed itself to providing the programs to which industry will turn.

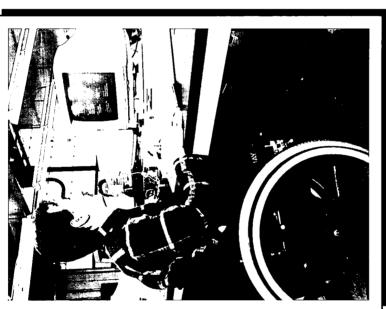

The commitment to work force development programs, such as the TDC and Virtual Workplace, represent the NHCTCS commit-

ment to dissolving the division between "traditional" and "nontraditional" students. With an average student age of 27, college populations comprise a combination of traditional students and

incumbent workers (employees who are currently in the work force) who are gaining technical education in their fields or exploring professional growth. Workers now know that, to advance their careers and remain vital, they must prepare for continual learning. Working closely with current employees and employers, the NHCTCS gives students the benefits of current industry knowledge and valuable "real world" points of view.

The investment of offering continuous education and training brings dividends. The NHCTCS creates wealth and contributes to the overall quality of life in New Hampshire by investing in its neighbors. Currently, over 90% of NHCTCS students are New Hampshire residents; and two out of three own or rent property in New Hampshire, many while raising families. Of its graduates who are

employed, 87% work for New Hampshire businesses. Graduates and students make a long term impact on New Hampshire's economy by (a) contributing directly through the consumer and tax structure, (b) creating an environment that allows companies to continue their in-state operations, and (c) helping state businesses capture a larger share of potential markets.

# Excellence in Education (continued)

New Hampshire's Community Technical Colleges are involved in countless partnerships and collaborations with businesses, organizations, and individuals. In equal partnership with the New Hampshire Department of Education, for example, it leads the School-to-Work effort in New Hampshire. The NHCTCS works with schools by providing Internet access. When President Clinton chose Walker School in Concord as the site to share his vision of Internet access at every school, the NHCTCS provided the technology the President used to illustrate this. The NHCTCS also provides Internet and technical support to over half the State agencies who us the Internet, including Health and Human Services, the Department of Employment Security, and the Governor's Office.

The New Hampshire Community Technical Colleges are proud institutions, working hard to form long lasting relationships with diverse businesses and investing in the state's people. The NHCTCS continues to search for exciting ways to respond to the demands of the business community and the student population,

to obtain the best possible teaching resources, and to ensure that its facilities have the training opportunities and resources to provide all student with an educational experience that meets or surpasses their own expectations and the industries' standards

Many students use their education at the NHCTCS to prepare for four-year colleges. Their goals will become easier as the NHCTCS works to make credits easily transferable, increasing the options for its graduates. At the same time, incumbent workers can participate in the NHCTCS to enhance their future without economic disruption to their professional lives. As the need for community technical education continues to rise, the New Hampshire Community Technical College System will continue to provide access to technical training; offer a challenging general education curriculum that provides strong skills in science, math, and communication; and invest in responsive partnerships that benefit both New Hampshire employers and workers. The state's businesses, their customers, our students, and the NHCTCS will all benefit.

New Hampshire's Community Technical Colleges graduated a total of 1546 students, 626 men and 920 women. These students represent a combination of full and part time students who attend day and evening sessions. In addition to these graduates, almost 30,000 people participated in the Division of Community Education, in which students choose to continue to enhance their education at night through a wide variety of courses.

A large percentage of these graduates, 885 (57%), went on directly to full time employment, and 330 (21%) are working part time. The vast majority of graduates (81%) are working in a field directly

related to their major. Choosing to continue their education at other colleges, universities, and schools were 155. Of the full time graduates of the New Hampshire Community Technical Colleges, 87% secured employment in New Hampshire.

The New Hampshire Community Technical College System offers over 75 Associate Degree programs, and over 170 Certificate or Diploma programs. In addition, NHCTCS offers a wide variety of enrichment courses.

### Sob Placement

NHCTCS partners with businesses all over the world to develop the programs which will benefit students the most. In New Hampshire alone, NHCTCS enjoys partnerships with over 700 different businesses. These partnerships range from a business serving in an advisory capacity, to business donating equipment to the colleges, and business providing facilities for students to get hands on experience as part of their studies.

after, and the employment rate is extremely high. NHCTCS students and graduates are prepared to enter the workforce in several different areas. The average starting wage for the class of 1997 was \$22,828. However, in some programs the average starting wages are \$35,000, and in highly specialized fields such as Aviation Technology, NHCTC graduates have started with wages up to \$50,000 a year.

Most graduates will build on their skills and progress quickly beyond their starting wage. The following chart illustrates historical starting wages.

### Flice Academy -

The New Hampshire Police Standards and Training Council is a unit of the New Hampshire Department of Regional Community Technical Colleges, with fiscal and rule making autonomy. It was first established by the legislature in 1971, and was merged with NHCTCS in 1985. Its objectives are to establish and maintain minimum hiring and training standards for police and corrections officers, provide mandatory pre-service training to new recruits, and provide ongoing in service training to certified officers and support personnel.

The police officers that we train include State Troopers, Highway Enforcement Officers, Special Agents of the Liquor Commission, Gaming Department Officers, Fire Marshals, Forest Rangers, Agriculture Department Investigators, Deputy Sheriffs, City and Town Police Officers, County Fair Security Guards, University of New Hampshire Police Officers, and NHTI Security Officers.

Although the Council was initially established to provide training and certification for police officers, through the Budget Act, we have also trained State Corrections Officers and civilian personnel of the Department of Corrections for many years. Two years ago, the Legislature gave us a formal certification authority over State Corrections Officers. By virtue of other legislation, we are responsible for setting the minimum curriculum and physical agility standards for the County Corrections Officers, who are trained by the NH Association of Counties, and we also provide basic and in service training for Probation and Parole Officers.

The Council is funded by the penalty assessment Fund established under RSA 188-F:31. Each court with criminal jurisdiction is required to levy a surcharge of \$2.00 or 15% on each fine imposed for all except municipal parking violations, and \$5.00 from each monthly prisoner supervision fee paid by persons on parole or grounds of probation

is deposited into this special, non-lapsing fund to support law enforcement and corrections training. An additional 2% is collected to support victim assistance programs in the state, and an additional 3% for funding court modernization programs.

The Council's headquarters is located adjacent to the grounds of the New Hampshire Technical Institute on Fan Road in Concord, in a modern criminal justice academy facility that includes classrooms and lecture halls, dormitory space, administrative offices, a tactical center with an indoor firing range, running track, and combination auditorium/practical exercise laboratory, and an outdoor emergency vehicle operations course.

The council employs a staff of 25, including administrative personnel, trainers, clerical, accounting, and maintenance workers. Its policies are set by the twelve member Police Standards and Training Council, four members of which, including the Commissioner of New Hampshire Community Technical Colleges, serve by virtue of their office. The remaining eight are appointed by the Governor. Administrative functions are under the control of the Director, who is appointed by the Commissioner of the New Hampshire Community Technical Colleges upon nomination of the Council. The Director also serves on the Leadership Team for the Department.

Graduates of both the 12 week Police academy and the six week Corrections Academy are awarded academic credits toward an Associate Degree in Criminal Justice upon completion of their respective course work.

At the Police Academy graduation, an outstanding graduate is awarded a scholarship for a full semester's attendance at any college in the NHCTC System.
